SAVING 1 L*
Half flush

(*) Comparing with a 6/3 L flush cistern

water, as future.

Water, this gift that hydrates us and irrigates the fields that provide us with nourishment. This sea in which we navigate, this rain that balances the world. What future awaits it? What future awaits us? "Water, as future." is more than a statement, it is a belief in responding to the threat that affects water. This is what leads us at OLI every day. Contributing to saving water, the efficiency of its use, the sustainability of its origin and the respect for this element at every moment of its use. It is being aware that there is a learning process to be done and that this is the time for it. We are concerned just as we are motivated by the knowledge that throughout our history we have contributed to a more responsible and sustainable water consumption. Lower consumption flushes and a more efficient use of water without wasting water in the bathroom are all part of OLI's principles. And this also leverages our future.

CISTERN WITH 2 INLET VALVES

This flushing cistern is distinguished by having two water inlet valves in its architecture. One for drinking water from the mains and another for non-potable water designed for rainwater⁽¹⁾ but suitable for other waters (boreholes or water wells) ensuring that only clear and filtered water⁽²⁾ is used. This way it's possible to reuse rainwater for toilet flushing, saving drinking water that is essential for human consumption. It allows a more efficient use of the water resource and a saving in the water bill.

SAVE 100%

OF DRINKING WATER ON TOILET FLUSHING
Exclusive connection to a second water source^(1,2)

SAVE 50%

OF DRINKING WATER ON TOILET FLUSHING
Exclusive connection to a second water source^(1,2)

⁽¹⁾The use of an internal circuit for the use of rainwater must comply with legal regulations in this type of usage (legislation suitable for the installation location). The same applies to water coming from other sources such as boreholes whose legal framework must be respected. The correct and efficient operation of the flushing cistern requires the use of clean and filtered water.

⁽²⁾ See the technical data sheet for the two inlet valves cistern for further specifications.

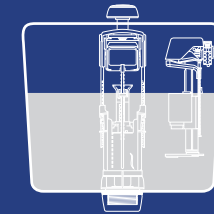

PLUS SYSTEM

This is a system created by OLI in which the inlet valve delays the water inflow into the cistern to prevent extra water being used for flushing. While flushing takes place, no new water enters the cistern. This allows saving up to 9 litres of water per day, corresponding to a 12% reduction in water bill⁽³⁾.

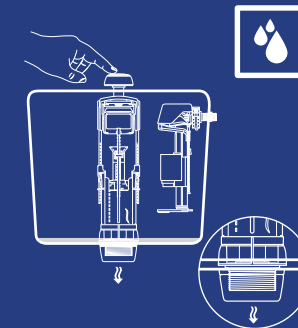

SAVE UP TO 9L
OF WATER PER DAY⁽³⁾

⁽³⁾Based on the average usage in a single-family home of 4 people with flushing cisterns without plus technology, with 18 flushes per day. Bill savings may vary according to the charges applied in each market.

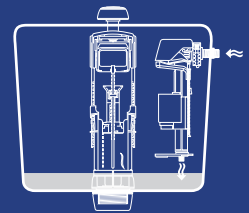

INLET VALVE IN
CLOSED POSITION

OPERATION MODE
FULL FLUSH

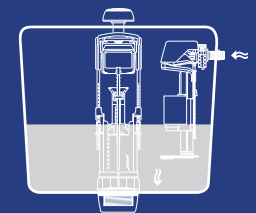

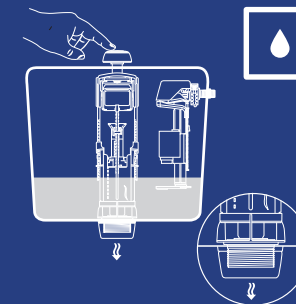

The cistern is emptied faster than the delaying system, while the inlet valve remains closed.

Once the water is flushed, the outlet valve closes and the delaying system makes the inlet valve open to fill the cistern.

OPERATION MODE
HALF FLUSH

PERFECT MATCH

OLI PRECISION MEETS DESIGN

70 years of experience in sanitary systems with a focus on cistern flushing culminated in the need to combine a ceramics range that matches OLI systems. We have always focused on water efficiency, operating accuracy, design and functionality.

OLI74 PLUS S90 cistern in combination with OLI wall-hung toilets is the perfect combination of performance and water efficiency, with a full flush of just 4 liters and a half flush of 2 liters of water*.

The combination of a cistern set to flush 4 liters (full flush) and 2 liters (half flush) with a toilet that is efficient and suitable for the purpose means immediate water saving.

OLI SOLUTION

The bathroom as a space that merges water efficiency with design and focuses on functionality. A complete range of products for the most demanding bathroom projects.

IN-WALL CISTERNS

OLI displays the main compatibilities between in-wall cisterns and sanitary ware.

The tests carried out on the new sanitary ware guarantee **100% compatibility** with all versions of the range: OLI74 PLUS, OLI120 PLUS, QUADRA PLUS and OLI80.

MIXER TAPS

Industrial design, simple lines and a sensitive touch are present in OLI's mixer tap range. In bathtubs, bidets, washbasins or showers, OCEAN mixers will be a unique detail.

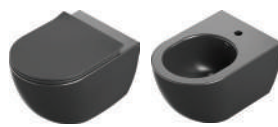

SANITARY WARE

A range that combines design with water performance. With Rim-off technology and high quality glazing, this range has a clean design that adapts to any bathroom.

RIVER | white wall-hung version

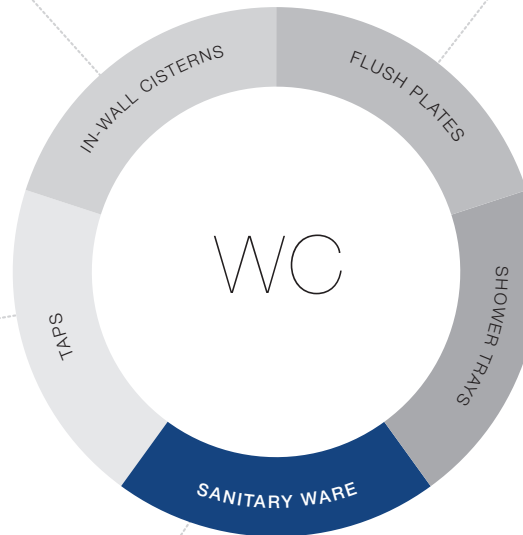

LAKE | matt black wall-hung version (available in white for wall-hung and floor versions)

LAGOON | white wall-hung version (also available for floor version)

HYGEA SMART WALL-HUNG TOILET (available in various finishes)

FLUSH PLATES

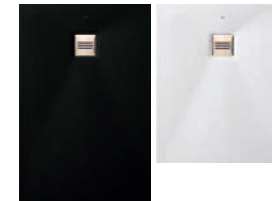

With a wide range of flush plates, OLI offers innovative solutions in terms of technology and design, such as the LESS IS MORE flush plate, designed by Alessio Pinto, the TRUMPET, designed by Álvaro Siza Vieira, the MOON made of porcelain and the GLASSY in tempered glass.

LESS IS MORE

SHOWER TRAYS

Ensuring functionality and design is a challenge and a trend that extends to OLI's shower tray range. In different sizes, shades and in antibacterial and non-slip material, the BALANCE range is a solution with a pure and minimalist style.

MIXER TAPS
OCEAN

WATER CERTIFICATION
- CLASS A

The OCEAN tap range have been put to ANQIP's demanding tests and trials, which resulted in a Class A rating according to the Water Efficiency Certification. With this classification, the OCEAN range becomes one of the most economical in its category.

The **matte black** finish is a market trend. With its soft touch, the OCEAN range is the final touch to an industrial style bathroom.

A tap range with a durable chrome finish, **guaranteed quality** and resistant to several years of use.
